

Admin Access

A guide to administrative access to your server.

What is an Admin User?

Your admin user is used for updating and managing software, installations, subscriptions and users.

How Many Admin Users Do I Get?

We provide one admin user per account in order to keep your information secure and your cloud running smoothly.

Best Practices.

Please don't share users or logins to the system - especially the admin user for your cloud on Swizznet. Only use your Swizznet server admin user for administrative tasks (trusted program installs, updates to trusted programs). Do not use this account for daily tasks - especially utilizing email and web browsing.
